

*Early Medieval Occupation Site at Rendlesham.* Whilst a mechanical excavator was at work near Fen Row, a quantity of pottery sherds were turned up. The Ipswich Museum authorities dated these at about the 10th and 11th centuries and one piece of black glazed pottery was thought to be 1st century A.D. The sherds obviously formed part of complete vessels broken by the excavator and were found in conjunction with burnt earth hollows some 6 inches below the surface. The site lies at the head of a small valley where there is a spring of fresh water.

Similar finds have been made by Mr. David Mace on the heath near Poplar Farm, Hollesley where he has excavated what appears to be a kiln. Sherds lay in great profusion on the surface over a wide area.

*An Index to Suckling.* Through the enterprise and financial backing of Sir Guy Hambling, Bart., of Yoxford, a long-needed index to the two volumes of Suckling's *History of Suffolk* is to be printed by Messrs. W. S. Cowell, Ltd., of Ipswich. The manuscript to be used is a large 4to volume in the possession of James M. Martin, Esq., the Ipswich collector and to him thanks are due for permission to undertake the work. The Index, which will contain some 20,000 references, will have the same page size as the small-paper edition of the original work. Only one hundred copies will be printed, at £3 3s. 0d. a copy, and orders should be sent to Messrs. Cowell immediately. A list of subscribers will be inserted and each copy will be numbered.

*Suffolk Place-Names.* Suffolk archæologists and historians will be glad to learn that the English Place-name Society has started on the production of a volume dealing with Suffolk. The work will be in the charge of Dr. P. H. Reaney, LITT.D., PH.D., who was responsible for the excellent volume on the neighbouring county of Essex. Hitherto students of place-names in Suffolk have relied on Skeat's *Place-names of Suffolk*, published by the Cambridge Antiquarian Society forty years ago; since then, much new source-material has come to light and the result of Dr. Reaney's labours will be keenly awaited.
